

**The EC120 Helicopter integrates more advanced technologies than any other light single-engine helicopter in the world.**

These advances help make the EC120 safer and more efficient. It provides spaciousness and comfort not usually found in a light helicopter. Four passengers plus pilot can travel in comfort seated in the extra-wide, unobstructed cabin with excellent visibility. The surprising amount of luggage space on this helicopter enables exceptional versatility.

- The EC120 is the first single-engine helicopter to meet the requirements of the new JAR 27 safety regulations (structurally energy attenuating fuel system, pilot and passenger seats).
- Passengers fly in reduced noise and better comfort.
- Generous storage space
- Clear view from every seat within aircraft

**Aircraft Specification**

Manufacturer: Eurocopter  
 Aircraft Type: EC120B Colibri  
 Registration: G-KLNP  
 Year: 2007  
 Passengers: 4 People

**Interior Layout**

Front: 1 passenger seat next to pilot.  
 Rear: 3 passenger seats facing forwards
