## G-XJET Lear 45

One of the most responsive air ambulances in the skies, the Lear 45 is designed to fly faster, higher and further. Its speed and operating flexibility enables Capital Air Ambulance to provide a swift and seamless transfer to and from a greater range of destinations across the world.

Operating at all times with medical staff specific to the patient's needs, the Capital Air Ambulance Lear 45 jet can carry one or two patients using its dual LifePort stretcher system and up to two travelling companions. The jet has a specially designed 36-inch access door to enable stretchers to access the aircraft easily and it is fully equipped to care for patients of all ages with any injury or medical condition up to and including intensive care level of dependency. High quality expert clinical care in the air is supported by state of the art medical equipment. Each flight is equipped and resourced to cope with any medical intervention required enroute.
