# ADVANCE AVIATION JET G200 OVERVIEW

Advance Jet Charter - The first Gulfstream Charter - G200 Overview

Whether it is business, holiday, or simply casual ride, Advance Aviation is in a position to offer you the unsurpassed specially tailored charter arrangement to best suit your desire with ultimate VIP treatment

## HIGHEST SAFETY STANDARD

In October 2011, Advance Aviation Jet takes pivotal step to be the one and only dedicated GULFSTREAM private jet operator for VIP Charter in Southeast Asia. With G200 on our fleet, and GV to be added very soon, it is clearly evident that we are not only to serve our client with our best Customer Service at the highest safety standard, but also with the best available aircrafts, both fixed wing and helicopter, in the world..

The first of the new generation of super mid-sized business jets, the G200® immediately captured public attention when it was introduced to the

business-aviation market in 1999. A decade later, the Gulfstream G200 large-cabin, mid-range business jet still boasts the longest range, the largest cabin and the best balanced overall capability and price in its category.

Its glass cockpit, featuring the Rockwell Collins Pro Line 4 avionics suite, presents system status flight information on easy-to-read, 7.25 inch-square displays for immediate interpretation. For added safety, the G200 offers color weather radar with turbulence detection, the TCAS II (traffic alert and collision-avoidance system), and an EGPWS (Enhanced Ground Proximity Warning System) with wind shear detection. Gulfstream also offers an optional auto-throttle system to reduce pilot workload for improved safety.

With a cabin length of 24 feet 5 inches and a height of 6 feet 3 inches, the G200's roomy interior offers two spacious living areas that enhance productivity while catering to each traveler's personal needs. Interior seating arrangements of Advance Aviation accommodates up to 10 passengers. The G200's spacious cabin creates a pleasant living environment with abundant sunshine from our traditional oval windows and 100 percent fresh air from our fresh-air system, both of which contribute to an overall feeling of spaciousness which reduces fatigue while promoting a sense of well-being.

To measure the value of a Gulfstream G200 large-cabin, mid-range business jet, consider the tangible factors such as its proven Pratt & Whitney engines, its plush seating, full galley and comfortable, stand-up headroom. Then reflect on the intangible factors: a dispatch-reliability rate greater than 99.7 percent, and a worldwide customer-support program that

encompasses Gulfstream and General Dynamics Aviation Services facilities on six continents. Now add to that a host of aircraft-support programs that contribute to our number-one ranking in product support year after year.

Performance, comfort, productivity, support and safety. There's no reason to consider another airplane in the super mid-sized business jet class.

## G200 PERFORMANCE

When it was introduced in 1999, the Gulfstream G200® was the first of the new generation of super mid-sized business jets to come to market. Launched well ahead of the competition, the G200 offered the longest range, the largest cabin and the best balanced overall capability and price in its category.

Today's Gulfstream G200 large-cabin, mid-range business jet is even better. It flies faster and farther and is able to cruise at a maximum altitude of 45,000 feet. With a maximum range of 3,400 nautical miles at Mach 0.75, the G200 is a true transcontinental performer. It often flies at its high speed cruise of Mach 0.82 and a maximum operating speed of Mach 0.85.

The G200 is powered by two high-thrust, power-efficient Pratt & Whitney PW306 engines controlled by a dual-channel FADEC (full authority digital engine control). At maximum weight, the takeoff distance of the G200 is 6,080 ft. When fueled for a typical transcontinental mission of 2,500 nm, the G200 is able to takeoff in 5,000 ft.

The G200 can carry up to 10 passengers and their luggage and fly approximately 3,000 nm. What's more, it can fly 2,000 nm without refueling after landing at its maximum landing weight. That means fewer stops along the way and a sizeable savings in time, effort and money. When leaving from NY with four passengers, you are able to fly non-stop to London, Caracas, Mexico City or anywhere else in the Continental US. With one stop, the G200 can reach Asia, the Middle East or anywhere in South America.

In short, the G200 combines outstanding performance with excellent climb capabilities, high-cruise altitude, high-speed long-range in the most comfortable cabin environment

## SERVICE ORIENTATION

Advance Aviation prides itself in being the ultimate VIP service provider. From the moment our staff greet you till the mission is completed, the aircraft is entirely yours! All details will be taken care of and well-coordinated to ensure a smooth journey not only during the flight but also transition before and after the flight. In-flight amenities such as soft drinks/mineral water, flight details will be offered. Personal Assistant is also available upon request.

For international arrival into Suvarnabhumi Airport, we pick you up right when you step out of your plane, taking you through Immigration, Custom, and luggage handling, directly to our own lounge to board helicopter from our own helipad at our Operation Center just 10 minutes away from the airport. There you can choose to fresh up, check your emails, enjoy drinks and snacks or quickly get on board. The lounge is also available for domestic VIPs who wish to board our helicopter from our Operation Center. For those who arrive at Don Mueang Airport, we will usher you directly to our helicopter.

## HUMAN RESOURCE DEVELOPMENT

We believe that our staffs are the most valuable resource of the company. We continuously invest to enhance our staff knowledge and expertise to bring our team to the forefront of VIP Aviation Industry.

## Helicopter and Private Jet : HISTORY AND FUTURE PLAN

- **January 2006:**

Vice Chairman & owner of AA, Mr. Chai Nasylvanta decided that a helicopter would be ideal for his father, Privy Councilor Chaovana Nasylvanta who was in his late 70s, providing convenience, comfort and saving travelling time for his audience with His Majesty King Bhumibol Adulyadej at the Klai Kang Won Palace on Tuesdays.

- **December 2006:**

In order to recover some of the costs when the helicopter was idle on other days, he decided to charter it to serve VIPs and corporate users as the helicopter was already configured for VIP users plus the market looked quite promising. Thus Advance Aviation was born.

- **February 2008:**

First aircraft Twin-engine turbine EC-135 was delivered with commencement of Advance Aviation's Operation. Since then, it has been well accepted in the market as the only true VIP helicopter charter in Thailand.

- **January 2009:**

Our second aircraft - single engine, EC-130 is being stationed in Phuket to offer inter-islands transfer and sightseeing over magnificent Islands of Phuket, Phi Phi, Phang Nga, Samui, Koh Tao, etc.

- **October 2010:**

Third Aircraft adding to our fleet, single engine EC-130 is being operated in Chiang Mai and its provincial territory. It's the first helicopter ever service in North Region of Thailand

- **November 2011:**

Fourth Aircraft adding to our fleet, twin engine EC-135 is being operated in Bangkok and its provincial territory as the second helicopter in Bangkok Base. Meanwhile, we are expanding into Private Jet charter business with our first Gulfstream G200, base in Bangkok to complete ourselves as the one and only true VIP charter in Thailand.
