
Turbo Prop

King F90

RANGE: 1,250 nm
SPEED: 300 mph
PASSENGERS: 5
CABIN DIM.: L: 12.4' W: 4.5' H: 4.8'
HOME BASE: Austin, TX

The King Air F90 is among the fastest and longest range twin turboprops available. Having powerful and efficient engines and a stream line design, all add up to a maximum endurance of four hours with a good true airspeed. Throw in a little tailwind and the King Air F90 could make a 1,400 nm trip nonstop with reserves. The King Air F90 has a five seat cabin, so it can fill the corporate style mission with two professional pilots and up to five passengers. It didn't take long for customers to realize that the King Air F90 could fly trips in terms of range and speed that no other airplane anywhere near the price could manage. For this reason the King Air F90 is one of the most highly requested aircraft in its class.
