Challenger 300

The Challenger 300 was introduced by Bombardier in 2004 and offers a spacious cabin capable of seating 9 passengers. Fully loaded the Challenger 300 can fly up to 3,000 miles non-stop, and can achieve its full range of 3,300 miles with 7 passengers on board. Like most new aircraft the Challenger 300 boasts very low operating costs and a superbly appointed cabin. The combination of cabin size and economics makes the Challenger 300 well suited for short, medium and long range flying.
