

# PILATUS *pc-12* XA-UXX

  
**ExecuJet**  
LUXAVIATION CMI GROUP

Introduced in 1994, the Pilatus PC-12 is the largest civil single engine turbo-prop aircraft in production. With typical Swiss workmanship this aircraft offers a large cabin and versatility to load large items through the purpose designed aft loading door. It's short take-off and landing capability ensure your party of leisure travellers will have direct access to remote safari lodges and project teams can be conveniently flown direct to site airfields in many cases. Although certified for single pilot operations, ExecuJet recommends 2 pilots in poor weather conditions and longer flights.
